

Pole Top Make-off

General Recommendations

The PREFORMED™ Pole Top Make-Off is a complimentary fitting to the Guy-Grip, described earlier. It is in effect a custom built Pole Top Stay, and consists of a single set of 3 galvanised steel wires of 1400 M Pa strength, helically formed with a single unformed 700 M Pa core wire. The central part of the Make-Off is double-wrapped onto the pole top, after which the two legs are wrapped over the unformed wire to form a seven strand stay of similar strength and diameter to that of a normal staywire, the minimum effective “stay” length is 1800 mm. The central “king” wire is of sufficient length that the parts above the crossover may be utilised as an earth bond.

Similar fittings are designed for use with thimble adaptors.
