

Communication Ties

PREFORMED™ Communication Ties are versatile one-piece units designed for safe, easy use with combinations of specific insulator and wire sizes. Their helical configuration provides fast, easy installation, without tools, and assures uniformity of completed assemblies all along the line. In addition to presenting a neat, modern appearance, PREFORMED™ Communication Ties promote extended line service life and offer substantial savings in labour, time and materials.

PREFORMED™ Communication Ties' unbalanced loading feature prevents "slack-back" in adjacent spans so repairs can be effected more quickly and easily in less time and at lower cost. Elimination of tie wires and splints reduces installation time. Lack of direct contact between wire and insulator prevents fatigue damage and abrasion.
