

Double-Wrap Guy-Grip

General Information

Double-Wrap Guy-Grips are designed to terminate solid or stranded wire used for stays, catenaries/messengers etc. at pole top positions, when Stay Insulators are NOT used. Suitable for varying pole diameter and for double wrapping, the Double-Wrap Guy-Grip secures the strand at the top of the pole. A standard Guy-Grip of the correct size is used to terminate the Staywire at the Stayrod.

Product Characteristics:

- Positive grip upon the strand that cannot be displaced by bending or vibration.
- Even distribution of pressure along a wide area, eliminating concentrated forces.
- Fast, simple and uniform application.
- Compatibility with the strand to which the fitting is applied.

Application Note: ENSURE THE CORRECT SIZE FITTING IS USED.

Crossover Marks: Indicate starting point for application.

Pitch Length: One complete wrap.

Colour Code: Assists in identification of strand size.

Identification Label: Shows catalogue number and strand diameter range.

Cable Loop: Standard on all sizes
