

Lashing Rods

PREFORMED™ Lashing Rods can be used on all types of messengered overhead cables. They are particularly adaptable to spans obstructed by trees or short spans over traffic intersections.

Lashing Rods are made of the same basic material as the messenger to which they are applied. They feature over-all low cost: In buying them, installing them, and maintaining them. Wrap on easily and quickly without tools. Keep labour costs to a minimum. One-piece helical design assures additional savings because it eliminates the use of clips, clamps and spinners.

Once applied, PREFORMED™ Lashing Rod provide a permanently snug fit and trim, modern appearance. They are offered in a wide range of sizes for both Galvanized and Copper-covered Messengered Cable.
