

Thimble Grip

THIMBLE-GRIP installed at the ground anchor of pole stays, provides today's most modern method of securing pole stays. It is neat in appearance, free from bolts or high-stress holding devices. A one-piece terminating fitting, this unique product can be applied in seconds without the use of tools.

The assembly is complete and permanent, assures positive grip under the most extreme conditions, and is made of the same material as the strand to which it is applied. It will meet the rated breaking strength of the strand.

THIMBLE-GRIP may be removed and re-applied three times, if necessary, on new construction, for the purpose of retensioning stays. It should not be re-used after original installation.

BE SURE THE CORRECT SIZE IS USED.
